                                                                                                                                             Spinach debranching enzyme (DE) (R98371) is useful for modifying the branching degree of amylopectin synthesised in plants. Its amino acid sequence was deduced from a CDNA clone (T31478) derived from spinach leaves. The DE can be obtd. by recombinant expression in procaryotic or eucaryotic host cells. The DE may also be expressed in transgenic plants, e.g. potato. The consequent increase in DE activity results in the blosynthesis of modified starches by the plant. These may have food or industrial applns.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a fragment of a novel Zea mays pullulanase protein. This protein and the encoding nucleic acid fragments may be used to create transgenic plants in which corn pullulanase is present in cells at levels differing from the norm, or in cell types or developmental stages where it is not normally found, in order to alter starch structure in those cells. They may also be used to isolate cDNAs and genes encoding homologous pullulanase from the same or other plant species, to amplify those genes and to produce antibodies for screening of cDNA expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2ea

The enzyme variants are useful for converting starch to one or more sugars. This is useful when starches such as corn, potato, wheat, manioc and rice starch are used as starting materials in commercial large scale production of sugars, such as high fructose syrup, high maltose syrup, maltodextrins, amylose, G4-G6 oligosaccharides and other carbohydrates such as fat replacers. The thermostable debranching enzymes of the invention make it possible to perform liquefaction and debranching simultaneously before the saccharification step. By debranching using the thermostable debranching enzyme variants during liquefaction together with the action of an alpha-amylase, the formation of panose precursors is reduced, thereby reducing the panose content in the final product and increasing the overall saccharification yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a pullulanase amino acid sequence. Pullulanases are debranching enzymes which can attack amylopectin. This sequence represents a parent enzyme from which genetically engineered variant debranching enzymes can be created. The genetically engineered enzyme has an improved thermostability at a pH in the range of 4-6 compared to the parent enzyme. The modified enzyme may alternatively or also have an increased activity towards amylopectin and or glycogen compared to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-JAN-2000

APC-9603. The present specification also describes: (1) a vector containing the DNA encoding a trimmed enzyme; (2) a recombinant microbe transformed by the DNA; and (3) preparation of a trimmed enzyme in which the microbe of (2) is cultured and the trimmed enzyme is collected from the culture. The method can prepare a trimmed enzyme of wide substrate specificity having heat resistance and being active in acid region efficiently.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding a trimmed enzyme - enzyme with wide substrate speci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

This sequence represents a pullulanase amino acid sequence. Pullulanases are debranching enzymes which can attack amy lopectin. This sequence represents a parent enzyme from which genetically engineered variant debranching enzymes can be created. The genetically engineered enzyme has an improved thermostability at a pH in the range of 4-6 compared to the parent enzyme. The modified enzyme may alternatively or also have an increased activity towards amylopectin and or glycogen compared to the

The enzyme variants are useful for converting starch to one or more sugars. This is useful when starches such as corn, potato, wheat, manioc and rice starch are used as starting materials in commercial large scale production of sugars, such as high fructose syrup, high maltose syrup, maltodextrins, amylose, 64-66 oligosaccharides and other carbohydrates such as fat replacers. The thermostable debranching enzymes of the invention make it possible to perform liquefaction and debranching simultaneously before the saccharification step. By debranching using the thermostable debranching enzyme variants during liquefaction together with the action of an alpha-amylase, the formation of panose precursors is reduced, thereby reducing the panose content in the final product and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               434
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the pullulanase enzyme precursor isolated from Bacillus deramificans T 89.117D. The pullulanse hydrolyses alpha-1,6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods and to clarify fruit juices.

nucleic acids encoding them, vectors, host cells and methods for creombinant production. The modified pullulanses are useful in the starch industry for the saccharification of aqueous liquefied starch, forming syrups of high glucose and maltose content. Other uses (not claimed) are: as anti-staling additives in bread; in the preparation of oligosaccharides from amylopectin or of the proparation of oligosaccharides from amylopectin or of the proparation of oligosaccharides from amylopectin or of tetraholosides from maltose; to condense mono- or oligosaccharides, or in the pharmaccutical industry (no details). When used for smounts of by-products, especially they provide higher glucose that saccharification, the modified pullulanses reduce the amounts of by-products, especially they provide higher glucose to reversion reaction products. When used with glucosamylase, they make possible a higher level of dissolved solids in the material consecution; friends access in increased productivity and a more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the recombinant pullulanase appears to be a result of misprocessing of the signal sequence by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The invention provides modified pullulanases, especially N-terminally truncated B. deramificans modified pullulanase (see Y31747-48), and the provides will be considered by the control of the control o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of catalysing the hydrolysis of alpha-1,6-glucosidic bonds in amylopectin and pullulan. The invention relates to the discothat B. deramificans pullulanase recombinantly produced in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacillus host is modified yet retains the ability to catalyse the hydrolysis of an alpha-1,6-glucosidic bond.
